Experience

Co-founder and developer @Mooshuroi *September 2020-Present*

- Developing a browser extension along with a web-app to be used within a social enterprise **Django**
- Successfully completed the Qincubator programme at QMUL
- Next steps grant funding

Part-time Teaching Assistant/Demonstrator @Queen Mary University of London *September 2019-Present*

- Responsible for the assessments of first and second year students by giving constructive feedback and help them achieve higher results
- Further developed my communication and team-working skills
- Assisted modules: **Software Engineering, Algorithms and Data Structures**, Procedural Programming, Computer Systems and Networks, Logic and Discrete Structures, Fundamentals of Web Technology

Part-Time Web-Developer @Phlashweb *August 2019 – November 2019*

- Captured reusable components of **a Laravel (PHP)** web application and optimised the code
- Further implemented parts of already existing Wordpress projects
- Responsible for fixing different visual bugs for an increased responsiveness of the websites

3 Internships (@ERECTAAT, @MULTISERVICE SRL, @Montichiari's Council) *2015-2018 (3 months)*

- Unpaid internships while still in high school
- Maintained and developed websites using technologies such as **Bootstrap, Wordpress, PHP**
- LAN Administration and network devices installation (NAS servers, MF Printers)
- Developed important team-working skills

Other Projects

- Social News Application where users could choose their favourite news categories, like and comment on articles (**Django, AJAX)**
- Designed the structure and developed the Backend of a property searching website within a group of 5 (**applied various design patterns through OOP in PHP**)
- Designed and built a Weather Application having as main stakeholders Excursionists (**React Js - various APIs**)
- Developed from scratch a blog-style website (**HTML, CSS, PHP, MySQL**)
- Developed and published a website (compraedona.com) with the goal of donating to different NGOs through affiliate links. (Used: **Html, Css, JavaScript, Bootstrap**)
- Developed a free latency communication between **Arduino** (gyroscope) and Unity (using **C#** for scripting, Arduino language and **C++** for linking the different software parts).
- Check out my portfolio for some other projects such as LAN chats in **TCP** and **UDP**
